CHAPTER 24

Class VI Injection Wells and Facilities Underground Injection Control Program

Section 1. Authority and Purpose. These regulations are promulgated pursuant to W.S. 35-11-101 through 1904, specifically 313, and no person shall sequester carbon dioxide unless authorized by an Underground Injection Control (UIC) permit issued by the Department of Environmental Quality (DEQ). The injection of carbon dioxide for purposes of a project for enhanced recovery of oil or other minerals approved by the Wyoming Oil and Gas Conservation Commission shall not be subject to the provisions of this regulation unless the operator converts to geologic sequestration upon the cessation of oil and gas recovery operations or as otherwise required by the Commission.

These rules and regulations also provide financial assurance for the purposes specified in 35-11-313.

- **Section 2. Definitions.** The following definitions supplement those definitions contained in Section 35-11-103 of the Wyoming Environmental Quality Act.
- (a) "Administrator" means the administrator of the water quality division of the department of environmental quality.
- (b) "Aquifer" means a zone, stratum or group of strata that can store and transmit water in sufficient quantities for a specific use.
- (c) "Area of review" means the subsurface three-dimensional extent of the carbon dioxide plume, associated pressure front, and displaced fluids, as well as the overlying formations and surface area above that delineated region.
- (d) "Background" means the constituents or parameters and the concentrations or measurements which describe water quality and water quality variability prior to the subsurface discharge.
- (e) "Bore/casing annulus" means the space between the well bore and the well casing.
- (f) "Carbon dioxide plume" means the underground extent, in three dimensions, of an injected carbon dioxide stream.
- (g) "Carbon dioxide stream" means carbon dioxide, plus associated substances derived from the source materials and any processing, and any substances added to the stream to enable or improve the injection process. This chapter does not apply to any carbon dioxide stream that meets the definition of a hazardous waste under 40 CFR Part 261.
 - (h) "Casing/tubing annulus" means the space between the well casing and the tubing.

- (i) "Cementing" means to seal the annular space around the outside of a casing string using a specially formulated mixture to hold the casing in place and prevent any movement of fluid in this annular space. Cementing also includes operations to seal the well at the time of abandonment.
- (j) "Class VI well" means a well injecting a carbon dioxide stream for geologic sequestration. Class VI wells are regulated under this chapter.
- (k) "Confining zone" means a geological formation, group of formations, or part of a formation that is capable of limiting fluid movement from an injection zone.
- (1) "Corrective action" means the use of administrator-approved methods to ensure that wells within the area of review do not serve as conduits for the movement of fluids into geologic formations other than those to be authorized under the permit.
 - (m) "Director" means the director of the department of environmental quality.
- (n) "Draft permit" means a document indicating the tentative decision by the department to issue or deny, modify, revoke and reissue, or terminate a permit. A notice of intent to terminate a permit and a notice of intent to deny a permit are types of draft permits. A denial of a request for modification, revocation and reissuance, or termination is not a draft permit. A draft permit for issuance shall contain all conditions and content, compliance schedules and monitoring requirements required by this chapter.
- (o) "Duly authorized representative" means a specific individual or a position having responsibility for the overall operation of the regulated facility or activity. The authorization shall be made in writing by a responsible corporate officer and shall be submitted to the administrator.
- (p) "Endangerment" means exposure to actions or activities which could pollute an Underground Source of Drinking Water (USDW).
- (q) "Excursion detection" means the detection of migrating carbon dioxide at or beyond the boundary of the geologic sequestration site.
- (r) "Fact sheet" means a document briefly setting forth the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit. Fact sheets for Class VI wells are incorporated into the public notice.
- (s) "Fluid" means any material which flows or moves, whether semisolid, liquid, sludge, gas or any other form or state.
- (t) "Geologic sequestration project" means an injection well or wells used to emplace a carbon dioxide stream into an injection zone for geologic sequestration. It includes the subsurface three-dimensional extent of the carbon dioxide plume, associated pressure front, and displaced brine, as well as the surface area above that delineated region. (Reference Section 35-11-103(c) of the Wyoming Environmental Quality Act for definitions of geologic sequestration, geologic sequestration site, and geologic sequestration facilities.)

| | 99 |
|---|----|
| 1 | 00 |

(u) "Groundwater" means subsurface water that fills available openings in rock or soil materials such that they may be considered water saturated under hydrostatic pressure.

(v) "Groundwaters of the state" are all bodies of underground water which are wholly or partially within the boundaries of the state.

(w) "Hazardous waste" means a hazardous waste as defined in Chapter 2, Section 1 (c), Wyoming Hazardous Waste Rules and Regulations.

(x) "Individual permit" means a permit issued for a specific facility operated by an individual operator, company, municipality, or agency. An individual permit may be established as an area permit and include multiple points of discharge that are all operated by the same person.

(y) "Injectate" means the material being disposed of through any underground injection facility after it has received whatever pretreatment is done.

(z) "Injection zone" means a geologic formation, group of formations, or part of a formation receiving fluids through a well.

(aa) "Lithology" means the description of rocks on the basis of their physical and chemical characteristics.

(bb) "Log" means to make a written record progressively describing the strata and geologic and hydrologic character thereof to include electrical, radioactivity, radioactive tracer, temperature, cement bond and similar surveys, a lithologic description of all cores, and test data.

(cc) "Long string casing" means a casing which is continuous from at least the top of the injection interval to the surface and which is cemented in place.

(dd) "Mechanical integrity" means the sound and unimpaired condition of all components of the well or facility or system for control of a subsurface discharge and associated activities.

(ee) "Permit" means a Wyoming Underground Injection Control permit, unless otherwise specified.

(ff) "Permittee" means the named permit holder.

(gg) "Plume stabilization" means the carbon dioxide that has been injected subsurface essentially no longer expands vertically or horizontally and poses no threat to USDWs, human health, safety, or the environment.

(hh) "Point of compliance" means a point at which the permittee shall meet all permit and regulatory requirements.

(ii) "Point of injection" means the last accessible sampling point prior to a fluid being released into the subsurface environment through a Class VI injection well.

149 150

"Post-injection site care" means monitoring, measurement, verification, and other (ii) actions (including corrective action) following cessation of injection, as required under Section 17 of this chapter.

- (kk) "Pressure front" means the zone of elevated pressure that is created by the injection of the carbon dioxide stream into the subsurface. The pressure front of a carbon dioxide plume refers to a zone where there is a pressure differential sufficient to cause movement of injected fluids or formation fluid if a migration pathway or conduit were to exist.
- "Public hearing" means a non-adversary hearing held by the administrator or (11)director of the department. The hearing is conducted pursuant to Chapter 3 of the Wyoming Department of Environmental Quality Rules of Practice and Procedure.
- "Radioactive waste" means any waste which contains radioactive material in concentrations which exceed those listed in 10 CFR Part 20, Appendix B, Table II, Column 2 as of December 22, 1993.
- "Receiver" means any zone, interval, formation or unit in the subsurface into which a carbon dioxide stream is injected.
- "Responsible corporate officer" means a president, secretary, treasurer, or vice (00)president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation.
- "Secondarily affected aquifer" means any aquifer affected by migration of fluids from an injection facility, when the aquifer is not directly discharged into.
- "Site closure" means the point/time, as determined by the director, at which the (qq) owner or operator of a geologic sequestration project is released from post-injection site care responsibilities.
 - (rr) "Subsurface discharge" means a discharge into a receiver.
- "Transmissive fault or fracture" means a fault or fracture that has sufficient (ss)permeability and vertical extent to allow fluids to move beyond the confining zone.
- "USDW" or "Underground source of drinking water" means those aguifers or portions thereof which have a total dissolved solids content of less than 10,000 mg/L, and are classified as either Class I, II, III, IV (a), or Special (A), pursuant to Chapter 8, Quality Standards for Wyoming Groundwaters, Water Quality Rules and Regulations.
- "US EPA Administrator" means the regional administrator of US EPA's Region 8 office in Denver, Colorado.
- "Vadose Zone" means the unsaturated zone in the earth, between the land surface and the top of the first saturated aquifer. The vadose zone contains water at less than saturated conditions.

| 197 | (ww) "Water qualit | y management area" means the area delineated for the protection of | | | |
|------------|--|--|--|--|--|
| 198 | water quality under a department approved plan developed under Sections 303, 208 and/or 201 of | | | | |
| 199 | the Federal Clean Water Act, | as amended. | | | |
| 200 | | | | | |
| 201 | (xx) "Well" means | s an opening, excavation, shaft or hole in the ground allowing or | | | |
| 202 | used for an underground injec | tion, or for monitoring. | | | |
| 203 | 5 | | | | |
| 204 | (yy) "Workover" i | means to pull the tubing, packer, or any downhole hardware from | | | |
| 205 | | or refurbish it prior to placing that hardware back in service, or to | | | |
| 206 | enter the hole with any drillin | · · · | | | |

| 208 | (zz) "Wellhead pr | otection area" means the area delineated for the protection of a | | | |
| 209 | | a groundwater source under a department approved plan developed | | | |
| 210 | | the federal Safe Drinking Water Act. | | | |
| 211 | pursuant to Section 1328 of the | ic reactal Safe Diffiking water Act. | | | |
| 411 | | | | | |
| 212 | Section 3. Appl | icability. | | | |
| 213 | • • | · | | | |
| 214 | (a) These regulat | ions shall apply to all Class VI wells used to inject carbon dioxide | | | |
| 215 | streams for the purpose of geo | ** * | | | |
| 216 | streams for the purpose of geo | nogic sequestration. | | | |
| 217 | (b) In addition, the | nese regulations shall apply to owners and operators of Class I | | | |
| 218 | | experimental or demonstration carbon dioxide injection projects | | | |
| 219 | | VI geologic sequestration permit for their well or wells. | | | |
| 220 | who seek to apply for a class | vi geologic sequestration permit for their well of wells. | | | |
| 221 | (i) Owne | ers and/or operators of permitted Class I or Class V injection well(s) | | | |
| 222 | | s) to a Class VI well shall apply for a Class VI permit and shall | | | |
| 223 | | at the well(s) was/were engineered and constructed to meet the | | | |
| 224 | requirements outlined in Section | | | | |
| 225 | requirements outlined in Secti | on y of these regulations. | | | |
| 226 | (ii) If the | administrator determines that USDWs will not be endangered, such | | | |
| 227 | | nistrator's discretion, from the casing and cementing requirements at | | | |
| 228 | | nd Section 11(a)(i)(A) through (C). | | | |
| 228 229 | Section 9(0)(1) unough (vii) a | nu section 11(a)(1)(A) unough (C). | | | |
| 230 | (a) For owners or | ad/or appreture of permitted Class II injection well(s) scaling to | | | |
| | | nd/or operators of permitted Class II injection well(s) seeking to s VI well, the following shall apply: | | | |
| 231 232 | convert their well(s) to a Clas | s vi wen, the following shall apply: | | | |
| 232 233 | (;) A ft | consultation with the Oil and Cas Consumption Commission | | | |
| | * / | consultation with the Oil and Gas Conservation Commission | | | |
| 234 | Supervisor, the director may r | equire a Class VI permit in consideration of the following: | | | |
| 235 | (A) | Increase in reservoir pressure within the injection zone(s). | | | |
| 236 | , | J | | | |
| 237 | (B) | Increase in carbon dioxide injection rates. | | | |
| 238 | (2) | · · · · · · · · · · · · · · · · · · · | | | |
| 239 | (C) | Decrease in reservoir production rates. | | | |
| 240 | | r | | | |
| 241 | (D) | Distance between the injection zone(s) and USDWs. | | | |
| 242 | (2) | = | | | |
| 243 | (E) | Suitability of the Class II area of review delineation. | | | |
| | (\mathbf{L}) | Summerly of the Stabb II area of 10 10 11 actions | | | |

| 244 | | - | |
|------------|----------------------|---------------|--|
| 245 | | (F) | Quality of abandoned well plugs within the area of review. |
| 246 | | (a) | |
| 247 | | (G) | The owner's and/or operator's plan for recovery of carbon |
| 248 | dioxide at the cessa | tion of injec | ction. |
| 249 | | (T.T.) | |
| 250 | | (H) | The source and properties of the injected carbon dioxide. |
| 251 | | | |
| 252 | | (I) | Any additional site-specific factors as determined by the |
| 253 | director. | | |
| 254 | | | |
| 255 | (ii) | | wner and/or operator of a Class II well shall apply for a Class VI |
| 256 | permit when there i | s an increas | sed risk to USDWs compared to their Class II operation. |
| 257 | | | |
| 258 | (iii) | | wner and/or operator of a Class II well may continue operation as a |
| 259 | | | ncreased risk to USDWs compared to their Class II operation. |
| 260 | When enhanced oil | recovery of | perations have ceased, the owner and/or operator may apply for a |
| 261 | Class VI permit. | | |
| 262 | | | |
| 263 | | | ons do not apply to the injection of any carbon dioxide stream that |
| 264 | meets the definition | of a hazaro | dous waste. |
| | | | |
| 265 | Section 4. | | ts required; processing of permits; and requirements |
| 266 | applicable to all | permits. | |

| 305 306 307 | (b) general permits | | processi | ng procedures applicable to all Class VI facilities, individual and |
| 308 309 310 | division. | (i) | The app | plicant shall submit five (5) copies of the permit application to the |
| 311 312 313 314 315 | | nistrator | nation of receives | 60 days of submission of the application, the administrator shall completeness. An application shall be determined complete an application and any supplemental information necessary to e regulations. |
| 316 317 318 | application will | (iii) begin th | | mittal of information by an applicant for an incomplete ss described in paragraph (b) of this section. |
| 319 320 321 322 | | | ator shal | any 60 day review period where an application is determined all prepare a draft permit for issuance or denial, prepare a fact sheet provide public notice pursuant to Section 20. |
| 323 | | (v) | The dire | ector may deny an individual permit for any of the following |
| 324 325 | reasons: | | (A) | The application is incomplete; |
| 326 | | | () | The approximation in the only letter |
| 327 328 | of applicable st | ate surfa | (B) ce or gro | The project, if constructed and/or operated, will cause violation oundwater standards; |
| 329 | • • | | | |
| 330 331 332 | which does not | meet the | (C) e require | The application contains a proposed construction or operation ments of this chapter; |
| 333 334 335 336 | | | | The permitted facility would be in conflict with or is in conflict head protection plan, state approved local source water protection ality management plan; or |
| 337 338 339 | the Environmen | ntal Qual | (E) lity Act. | Other justifiable reasons necessary to carry out the provisions of |

| 340 341 342 | (vi) If the director intends to deny an individual permit for any reason other than an incomplete or deficient application, a draft permit shall be prepared and public notice issued pursuant to Section 20 of this chapter. |
|---------------------------------|---|
| 343 | |
| 344 345 346 347 | (vii) A denial of a permit by the department is appealable by the applicant to the Environmental Quality Council in accordance with the Rules of Practice and Procedure. Requests for appeal must be in writing, state the reasons for appeal, and be made to both the director and the chairman of the Environmental Quality Council. |
| 348 | |
| 349 350 351 352 353 | (viii) Permits may be modified, revoked and reissued, or terminated either in response to a petition from any interested person (including the permittee) or upon the administrator's initiative. However, permits may only be modified, revoked and reissued, or terminated for the reasons specified in Section 4(b) of this chapter. All requests shall be in writing and shall contain facts or reasons supporting the request. |
| 354 | S. S |
| 355 | If the administrator decides the petition is not justified, the petitioner shall be sent a brief |
| 356 | written response giving the reason for the decision. A request for modification, revocation and |
| 357 | reissuance, or termination shall be considered denied if the administrator takes no action within |
| 358 | 60 days after receiving the written request. Denials of requests for modification, revocation and |
| 359 | reissuance, or termination are not subject to public notice and comment. Denials by the |
| 360 | administrator may be appealed for hearing to the Environmental Quality Council by a letter |
| 361 | briefly setting forth the relevant facts. |
| 362 | |
| 363 | (ix) The administrator may modify a permit when: |
| 364 | |
| 365 | (A) Any material or substantial alterations or additions to the facility |
| 366 | occur after permitting or licensing, which justify the application of permit conditions that are |
| 367 | different or absent in the existing permit; |
| 368 | |
| 369 | (B) Any modification in the operation of the facility is capable of |
| 370 | causing or increasing pollution in excess of applicable standards or permit conditions; |
| 371 | |
| 372 | (C) Information warranting modification is discovered after the |
| 373 | operation has begun that would have justified the application of different permit conditions at the |
| 374 | time of permit issuance; |
| 375 | |
| 376 | (D) Regulations or standards upon which the permit was based have |
| 377 378 | changed by promulgation of amended standards or regulations, or by judicial decision after the |
| | permit was issued; |
| 379 380 | (E) Cause exists for termination as described in this section but the |
| 381 | (E) Cause exists for termination, as described in this section, but the department determines that modification is appropriate; or |
| 382 | department determines that modification is appropriate, or |
| 383 | (F) Modification is necessary to comply with applicable statutes, |
| 505 | (1) With applicable statutes, |

(x) Minor modifications of permits may occur with the consent of the permittee without following the public notice requirements. Minor modifications will become

384

385 386

387

standards or regulations.

388 final 20 days from the date of receipt of such notice. For the purposes of this chapter, minor 389 modifications may only: 390 391 (A) Correct typographical errors; 392 393 (B) Require more frequent monitoring or reporting by the permittee; 394 395 Change an interim compliance date in a schedule of compliance, (C) 396 provided the new date is not more than 120 days after the date specified in the existing permit and 397 does not interfere with attainment of the final compliance date requirement; 398 399 (D) Allow for a change in ownership or operational control of a 400 facility where the administrator determines that no other change in the permit is necessary, 401 provided that a written agreement containing a specific date for transfer of permit responsibility, 402 coverage, and liability between the current and new permittees have been submitted to the 403 administrator; 404 405 (E) Change quantities or types of fluids injected which are within the 406 capacity of the facility as permitted and, in the judgment of the administrator, would not interfere 407 with the operation of the facility or its ability to meet conditions described in the permit and 408 would not change its classification; or 409 410 Change construction requirements approved by the administrator (F) 411 pursuant to department rules and regulations provided that any such alteration shall comply with 412 the requirements of this chapter. 413 414 The administrator may revoke and reissue or terminate a permit for any (xi) 415 of the following reasons: 416 417 (A) Noncompliance with terms and conditions of the permit; 418 419 Failure in the application or during the issuance process to (B) 420 disclose fully all relevant facts, or misrepresenting any relevant facts at any time; or 421 422 (C) A determination that the activity endangers human health or the 423 environment and can only be regulated to acceptable levels by a permit modification or 424 termination. 425 426 The administrator may modify a permit to resolve issues that could lead (xii) 427 to the revocation of the permit under Section 5(b) of this chapter. The administrator, as part of 428 any notification of intent to terminate a permit, shall order the permittee to proceed with 429 reclamation on a reasonable time period. 430 431 If the administrator tentatively decides to modify or revoke and reissue a permit, a draft 432 permit incorporating the proposed changes shall be prepared. The administrator may request 433 additional information and, in the case of a modified permit, may require the submission of an 434 updated application. In the case of revoked and reissued permits, the administrator shall require 435 the submission of a new application. 436

| 437 438 | (xiii) In a permit modification under Section 4(b) of this chapter, only those conditions to be modified shall be reopened when a new draft permit is prepared. All other | | | | | |
|-----------------|---|--|--|--|--|--|
| 439 | aspects of the existing permit shall remain in effect for the duration of the unmodified permit and | | | | | |
| 440 | the modified permit shall expire on the date when the original permit would have expired. When | | | | | |
| 441 | a permit is revoked and reissued under this section, the entire permit is reopened as if the permit | | | | | |
| 442 | has expired and is being reissued. During any revocation and reissuance proceeding, the | | | | | |
| 443 | permittee shall comply with all conditions of the existing permit until a new final permit is issued | | | | | |
| 444 | | | | | | |
| 445 | (xiv) Permit modifications, revocations or terminations shall be developed as a | | | | | |
| 446 | draft permit and are subject to the public notice and hearing requirements outlined in Section 20. | | | | | |
| 447 | | | | | | |
| 448 | (xv) Transfer of a permit is allowed only upon approval by the administrator. | | | | | |
| 449 | When a permit transfer occurs pursuant to this section, the permit rights of the previous permittee | | | | | |
| 450 | will automatically terminate. | | | | | |
| 451 | | | | | | |
| 452 | (A) The proposed permit holder shall apply in writing as though that | | | | | |
| 453 | person was the original applicant for the permit and shall further agree to be bound by all of the | | | | | |
| 454 | terms and conditions of the permit; and | | | | | |
| 455 | | | | | | |
| 456 | (B) Transfer will not be allowed if the permittee is in noncompliance | | | | | |
| 457 | with any term and conditions of the permit, unless the transferee agrees to bring the facility back | | | | | |
| 458 | into compliance with the permit. | | | | | |
| 459 | | | | | | |
| 460 | (C) When a permit transfer occurs, the administrator may modify a | | | | | |
| 461 | permit pursuant to this section. The administrator shall provide public notice pursuant to Section | | | | | |
| 462 | 20 for any modification other than a minor modification defined by this section. | | | | | |
| 463 | | | | | | |
| 464 | (c) Permit conditions. | | | | | |
| 465 | | | | | | |
| 466 | (i) All individual permits issued under this chapter shall contain the | | | | | |
| 467 | following conditions: | | | | | |
| 468 | (A) A ' (1 (1 '4 1 1 1'4' C | | | | | |
| 469 | (A) A requirement that the permittee comply with all conditions of | | | | | |
| 470 | the permit, and any permit noncompliance constitutes a violation of these regulations and is | | | | | |
| 471 | grounds for enforcement action, permit termination, revocation, or modification; | | | | | |
| 472 | (D) A manifest most that if the manufactor with a target in indication | | | | | |
| 473 | (B) A requirement that if the permittee wishes to continue injection | | | | | |
| 474 475 | activity after the expiration date of the permit, the permittee must apply to the administrator for, | | | | | |
| | and obtain, a new permit prior to expiration of the existing permit; | | | | | |
| 476 477 | (C) A ctinulation that it shall not be a defence for a normittee in an | | | | | |
| 477 | (C) A stipulation that it shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in | | | | | |
| 479 | order to maintain compliance with the conditions of this permit; | | | | | |
| 480 | order to maintain compitance with the conditions of this permit, | | | | | |
| 1 00 | | | | | | |

minimize or correct any adverse impact on the environment resulting from noncompliance with

A requirement that the permittee shall take all reasonable steps to

this permit;

(E) A requirement that the permittee properly operate and maintain all facilities and systems of treatment and control which are installed or used by the permittee to achieve compliance with the conditions of this permit. Proper operation and maintenance includes effective performance, adequate funding and operator staffing and training, and adequate laboratory and process controls including appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems only when necessary to achieve compliance with the conditions of the permit;

(F) A stipulation that the filing of a request by the permittee, or at the instigation of the administrator, for a permit modification, revocation, termination, or notification of planned changes or anticipated non-compliance, shall not stay any permit condition;

(G) A stipulation that this permit does not convey any property rights of any sort, or any exclusive privilege;

(H) A stipulation that the permittee shall furnish to the administrator, within a specified time, any information which the administrator may request to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit, or to determine compliance with the permit. The permittee shall also furnish to the administrator, upon request, copies of records required to be kept by the permit;

(I) A requirement that the permittee shall allow the administrator, or an authorized representative of the administrator, upon the presentation of credentials, during normal working hours, to enter the premises where a regulated facility is located, or where records are kept under the conditions of this permit, and inspect the discharge and related facilities, review and copy reports and records required by the permit, collect fluid samples for analysis, measure and record water levels, and perform any other function authorized by law or regulation;

(J) A requirement that the permittee furnish any information necessary to establish a monitoring program pursuant to Section 14 of this chapter;

(K) A requirement that all samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity, and records of all monitoring information be retained by the permittee. The monitoring information to be retained shall be that information stipulated in the monitoring program established pursuant to the criteria in Section 14 of this chapter;

(L) A requirement that all applications, reports, and other information submitted to the administrator contain certifications as required in Section 5(d) of this chapter, and be signed by a person who meets the requirements to sign permit applications found in Section 5(c), or for routine reports, a duly authorized representative;

(M) A requirement that the permittee give advance notice to the administrator as soon as possible of any planned physical alteration or additions, other than authorized operation and maintenance, to the permitted facility and receive authorization prior to implementing the proposed alteration or addition;

| 534 535 536 537 | (N) A requirement that any modification that may result in a violation of a permit condition shall be reported to the administrator, and any modification that will result in a violation of a permit condition shall be reported to the administrator through the submission of a new or amended permit application; |
|---------------------------------|---|
| 538 539 540 541 542 | (O) A requirement that any transfer of a permit must first be approved by the administrator, and that no transfer will be approved if the facility is not in compliance with the existing permit unless the proposed permittee agrees to bring the facility into compliance; |
| 543 544 | (P) A requirement that monitoring results shall be reported at the |
| 545 546 | intervals specified elsewhere in the permit; |
| 547 | (Q) A requirement that reports of compliance or non-compliance |
| 548 | with, or any progress reports on interim and final requirements contained in any compliance |
| 549 | schedule, if one is required by the administrator, shall be submitted no later than 30 days |
| 550 | following each schedule date; |
| 551 | |
| 552 | (R) A requirement that confirmed noncompliance resulting in the |
| 553 | migration of injected fluid into any zone outside of the permitted receiver must be orally reported |
| 554 | to the administrator within 24 hours, and a written submission shall be provided within five (5) |
| 555 | days of the time the permittee becomes aware of the excursion. The written submission shall |
| 556 557 | contain: |
| 558 | (I) A description of the noncompliance and its cause; |
| 559 | (1) A description of the holicomphance and its cause, |
| 560 | (II) The period of noncompliance, including exact dates and |
| 561 | times, and, if the noncompliance has not been controlled, the anticipated time it is expected to |
| 562 | continue; and |
| 563 | |
| 564 | (III) Steps taken or planned to reduce, eliminate, and prevent |
| 565 | reoccurrence of the noncompliance. |
| 566 | • |
| 567 | (S) A requirement that the permittee report all instances of |
| 568 | noncompliance not already required to be reported under paragraphs (c)(i)(Q) through (R) of this |
| 569 | section, at the time monitoring reports are submitted. The reports shall contain the information |
| 570 | listed in paragraph (c)(i)(R) of this section; |
| 571 | |
| 572 | (T) A requirement that in the situation where the permittee becomes |
| 573 | aware that it failed to submit any relevant facts in a permit application, or submitted incorrect |
| 574 | information in a permit application or in any report to the administrator, the permittee shall |
| 575 576 | promptly submit such facts or information; |
| 576 577 | (II) A requirement that the injection facility most construction |
| 578 | (U) A requirement that the injection facility meet construction requirements outlined in Section 9 of this chapter, and that the permittee submit notice of |
| 579 | completion of construction to the administrator and allow for inspection of the facility upon |
| 580 | completion of construction, prior to commencing any injection activity; |
| 581 | |

| | | (V) | A requirement that the permittee notify the administrator at such |
|---|--|--|---|
| 583 | times as the permit req | . , | fore conversion or abandonment of the facility; and |
| 584 | | | • |
| 585 | | (W) | A requirement that injection may not commence until |
| 586 | construction is complete | ` ' | 1 J |
| 587 | r | | |
| 588 | | (X) | A requirement that the owner or operator of a Class VI well |
| 589 | permitted under this pa | ` / | establish mechanical integrity prior to commencing injection or on |
| 590 | | | administrator. Thereafter, the owner or operator of Class VI wells |
| 591 | | | grity as defined in Section 13 of this chapter. |
| 592 | 110000 1110111101111 1110 011011 | | girly as defined in section 10 of this enapter. |
| 593 | | (Y) | A requirement that when the administrator determines that a |
| 594 | Class VI well lacks me | ` / | l integrity pursuant to Section 13 of this chapter, he/she shall give |
| 595 | | | nination to the owner or operator. |
| 596 | written notice of ms/ne | 1 determ | initiation to the owner of operator. |
| 597 | | (Z) | A requirement that, for any Class VI well that lacks mechanical |
| 598 | integrity injection one | ` / | are prohibited until the permittee shows to the satisfaction of the |
| 599 | | | that the well has mechanical integrity. |
| 600 | administrator under 50 | ction 13 | that the wen has meenamear integrity. |
| 601 | (ii) | In add | ition to the conditions required of all permits, the administrator |
| 602 | | | se basis, conditions as required for monitoring, schedules of |
| 603 | | | al conditions as are necessary to prevent the migration of fluids |

The public liability insurance shall be in addition to the financial (i) assurance required in section 19 of this chapter.

- The insurance policy shall provide for personal injury and property (ii) damage protection and shall be in place until a completion and release certificate has been obtained from the administrator certifying that plume stabilization has been achieved.
- (iii) The minimum insurance coverage for public liability insurance as required by W.S. §35-11-313(f)(ii)(O) shall be five hundred thousand dollars (\$500,000) for each occurrence of bodily injury or property damage, and one million dollars (\$1,000,000) aggregate.
- The public liability insurance shall include a rider requiring that the insurer notify the administrator whenever substantive changes are made to the policy, including any termination or failure to renew.
- Self-insurance in lieu of public liability insurance must meet state or federal requirements and be approved by the administrator.
- (d) All applications for permits, reports, or information to be submitted to the administrator shall be signed by a responsible officer as follows:
 - (i) For a corporation - a responsible corporate officer means:
- (A) A president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision making functions for the corporation; or
- (B) The manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding \$25 million (in second quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.
- For a partnership or sole proprietorship -- by a general partner or the (ii) proprietor, respectively;
- For a municipality, state, federal or other public agency -- by either the (iii) principal executive officer or ranking elected official.
- The application shall contain the following certification by the person signing the (d) application:

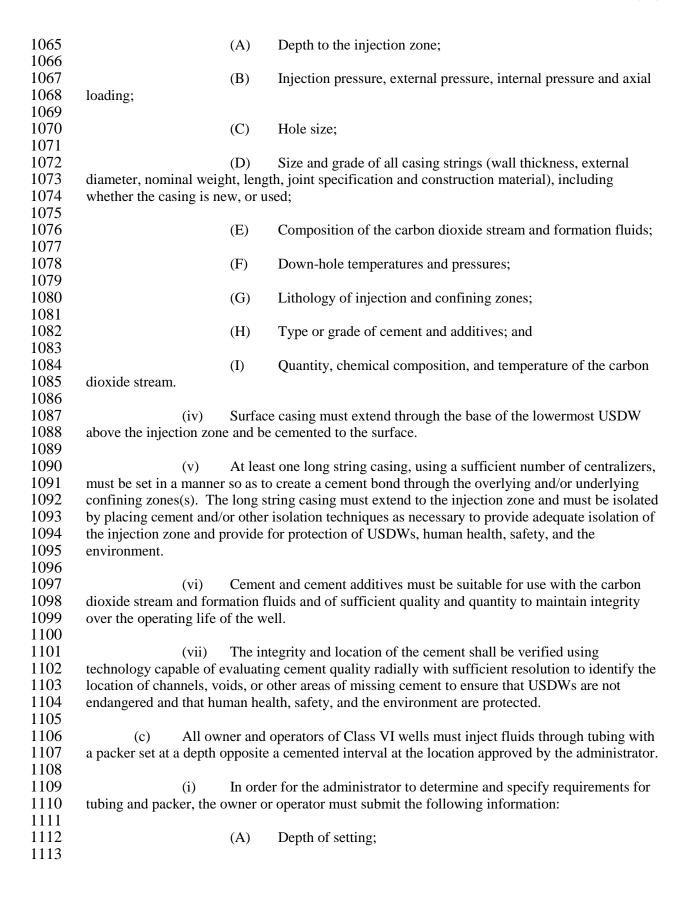

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

| 874 | | | | | | |

| 896 | Section | n 7. | Minimum criteria for siting Class VI wells. | | | |
| 897 | | | | | | |
| 898 | (a) | Owner | rs or operators of Class VI wells must demonstrate to the satisfaction of the | | | |
| 899 | ` ' | | wells will be sited in areas with a suitable geologic system. The geologic | | | |
| 900 | system must be | | | | | |
| 901 | ~ <i>j</i> ~ · · · · · · · · · · · · · · · · · · | F | | | | |
| 902 | | (i) | An injection zone of sufficient areal extent, thickness, porosity, and | | | |
| 903 | permeability to | ` ' | the total anticipated volume of the carbon dioxide stream; and | | | |
| 904 | F | | r | | | |
| 905 | | (ii) | A confining zone(s) that is free of transmissive faults or fractures and of | | | |
| 906 | sufficient areal | ` / | and integrity to contain the injected carbon dioxide stream and displaced | | | |
| 907 | | | low injection at proposed maximum pressures and volumes without | | | |
| 908 | | | g fractures in the confining zone(s) or causing non-transmissive faults to | | | |
| 909 | become transm | | 8 | | | |
| 910 | | | | | | |
| 911 | (b) | Owner | rs or operators of Class VI wells must identify and characterize additional | | | |
| 912 | ` ' | | t will impede vertical fluid movement, allow for pressure dissipation, and | | | |
| 913 | | | ortunities for monitoring, mitigation and remediation. Vertical faults and | | | |
| 914 | | | hese zones must be identified. | | | |
| | | | | | | |
| 915 | Section | n 8. | Area of review delineation and corrective action. | | | |
| 916 | | | | | | |
| 917 | (a) | The are | ea of review is based on computational modeling that accounts for the | | | |
| 918 | | | properties of all phases of the injected carbon dioxide stream. | | | |
| 919 | | 1 | | | | |

| 920 | (i) The owner or operator will re-evaluate the area of review at least every |
|------------|---|
| 921 | two (2) years during the operational life of the facility, and then no less frequently than every five |
| 922 | (5) years through the post-injection site care period until the geologic sequestration project is |
| 923 | closed in accordance with department rules and regulations. |
| 924 | |
| 925 | (b) The owner or operator of a Class VI well must prepare, maintain, and comply |
| 926 | with a plan to delineate the area of review for a proposed geologic sequestration project, re- |
| 927 | evaluate the delineation, and perform corrective action that meets the requirements of this section |
| 928 | As a part of the permit application for approval by the administrator, the owner or operator must |
| 929 | submit an area of review and corrective action plan that includes the following information: |
| 930 | |
| 931 | (i) The method for delineating the area of review that meets the |
| 932 | requirements of paragraph (c) of this section, including the name, version and availability of the |
| 933 | model to be used, assumptions that will be made, and the site characterization data on which the |
| 934 | model will be based; |
| 935 | |
| 936 | (ii) A description of: |
| 937 | |
| 938 | (A) The monitoring and operational conditions that would warrant a |
| 939 | re-evaluation of the area of review prior to the next scheduled re-evaluation as determined by the |
| 940 | minimum fixed frequency established in paragraph (a)(i) of this section. |
| 941 | The following of the control of the |
| 942 | (B) How monitoring and operational data (e.g., injection rate and |
| 943 | pressure) will be used to evaluate the area of review; and |
| 944 | pressure, will be used to evaluate the area of review, and |
| 945 | (C) How corrective action will be conducted to meet the |
| 946 | requirements of paragraph (d) of this section, including: |
| 947 | requirements of paragraph (a) of this section, increasing. |
| 948 | (I) What corrective action will be performed prior to |
| 949 | injection; |
| 950 | injection, |
| 951 | (II) What, if any, portions of the area of review will have |
| 952 | corrective action addressed on a phased basis, and how the phasing will be determined; |
| 953 | corrective action addressed on a phased basis, and now the phasing will be determined, |
| 954 | (III) How corrective action will be adjusted if there are |
| 955 | changes in the area of review; and |
| 956 | changes in the area of review, and |
| 957 | (IV) How site access will be ensured for future corrective |
| 958 | action. |
| 959 | action. |
| 960 | (c) Owners or operators of Class VI wells must perform the following actions to |
| 961 | delineate the area of review, identify all wells that require corrective action, and perform |
| 962 | corrective action on those wells: |
| | corrective action on those wens. |
| 963 | (i) Prodict voice accommentational modelings |
| 964 065 | (i) Predict, using computational modeling: |
| 965 | (A) The musicated 1-t1 andt1 andt |
| 966 | (A) The projected lateral and vertical migration of the carbon dioxide |
| 967 968 | plume and formation fluids in the subsurface from the commencement of injection activities until the plume movement ceases: |
| プログ | me dinne movemeni ceases: |

| 969 | (B) The pressure differentials, and demonstrate that pressure |
|--------------|--|
| 970 | differentials sufficient to cause the movement of injected fluids or formation fluids into a USDW |
| 971 | or to otherwise threaten human health, safety, or the environment will not be present (or for a |
| 972 | fixed time period as determined by the administrator); |
| 973 | |
| 974 | (C) The potential need for brine removal, and; |
| 975 | |
| 976 | (D) The long-term effects of pressure buildup if brine is not |
| 977 | removed. |
| 978 | |
| 979 | (ii) The modeling must: |
| 980 | (A) D 1 1 |
| 981 | (A) Be based on: |
| 982 | (D. D. (1.1. 1.1. 11. 11. 11. 11. |
| 983 | (I) Detailed geologic data available or collected to |
| 984 | characterize the injection zone, confining zone and any additional zones; and |
| 985 | (II) Anticipated anamating data including injection anasysma |
| 986 987 | (II) Anticipated operating data, including injection pressures, |
| 987 988 | rates and total volumes over the proposed operational life of the facility. |
| 989 | (B) Take into account any relevant geologic heterogeneities, data |
| 990 | (B) Take into account any relevant geologic heterogeneities, data quality, and their possible impact on model predictions; and |
| 990 991 | quanty, and their possible impact on model predictions, and |
| 992 | (C) Consider potential migration through faults, fractures, and |
| 993 | artificial penetrations. |
| 994 | artificial pelieu attolis. |
| 995 | (iii) Using methods approved by the administrator, identify all penetrations, |
| 996 | including active and abandoned wells and underground mines, in the area of review that may |
| 997 | penetrate the confining zone. Provide a description of each well's type, construction, date drilled, |
| 998 | location, depth, record of plugging and/or completion, and any additional information the |
| 999 | administrator may require; and |
| 1000 | administrator may require, and |
| 1001 | (iv) Determine which abandoned wells in the area of review have been |
| 1002 | plugged in a manner that prevents the movement of: |
| 1003 | progged in a mainer that prevents the movement of. |
| 1004 | (A) Carbon dioxide that may endanger USDWs or otherwise threaten |
| 1005 | human health, safety, or the environment, or; |
| 1006 | naman nearth, surety, or the environment, or, |
| 1007 | (B) Displaced formation fluids that may endanger USDWs or |
| 1008 | otherwise threaten human health, safety, or the environment. |
| 1009 | oner was un outen nominal neutral, surevy, or the environment |
| 1010 | (d) Owners or operators of Class VI wells must perform corrective action on all |
| 1011 | wells in the area of review that are determined to need corrective action using methods necessary |
| 1012 | to prevent the movement of fluid into or between USDWs including use of corrosion resistant |
| 1013 | materials, where appropriate. |
| | materials, where appropriate. |
| 1014 | materials, where appropriate. |
| 1014 1015 | (e) At a fixed frequency, not to exceed two (2) years during the operational life of |

| 1017 1018 | sequestration project is closed) as specified in the area of review and corrective action plan, or when monitoring and operational conditions warrant, owners or operators must: | | | | | |
|--------------|--|------------|--|--|--|--|
| 1019 | | | | | | |
| 1020 | | (i) | Re-evaluate the area of review in the same manner specified in paragraph | | | |
| 1021 | (c)(i) of this see | ` ' | The evaluate the area of review in the same mainer specified in paragraph | | | |
| | (c)(1) of this sec | ction; | | | | |
| 1022 | | | | | | |
| 1023 | | (ii) | Identify all wells in the re-evaluated area of review that require | | | |
| 1024 | corrective action | on in the | same manner specified in paragraph (c)(iv) of this section; | | | |
| 1025 | | | | | | |
| 1026 | | (iii) | Perform corrective action on wells requiring corrective action in the | | | |
| | | | , · · | | | |
| 1027 | reevaluated are | ea or revi | ew in the same manner specified in paragraph (d) of this section; and | | | |
| 1028 | | | | | | |
| 1029 | | (iv) | Submit an amended area of review and corrective action plan or | | | |
| 1030 | demonstrate to | the adm | inistrator through monitoring data and modeling results that no change to | | | |
| 1031 | | | corrective action plan is needed. | | | |
| | the area of fevi | cw and c | corrective action plan is needed. | | | |
| 1032 | | | | | | |
| 1033 | (f) | | nergency and remedial response plan (as required by Section 18) and a | | | |
| 1034 | demonstration | of financ | cial responsibility (as described by Section 19) must account for the entire | | | |
| 1035 | area of review | fas modi | fied], regardless of whether or not corrective action in the area of review | | | |
| 1036 | is phased. | | 1/ 0 | | | |

| 1121 | and volume of the car | rbon diox | ide stream; |
| 1122 | | | |
| 1123 | | (F) | Size of casing; and |
| 1124 | | | |
| 1125 | | (G) | Tubing tensile, burst, and collapse strengths. |
| 1126 | Section 10. | Class | VI Injection Depth Waiver Requirements |
| 1127 | | | |
| 1128 | (a) The o | owner an | d/or operator seeking a waiver of the requirement to inject below |
| 1129 | the lowermost USDW | V shall su | bmit a supplemental report concurrent with the permit application. |
| 1130 | The report shall conta | in the fo | llowing: |
| 1131 | | | |
| 1132 | (i) | A den | nonstration that the injection zone(s) is/are laterally continuous, is |
| 1133 | not a USDW, is not h | ydraulica | ally connected to USDWs, does not outcrop within the Area of |
| 1134 | Review, has the appro | opriate ge | eochemistry, and can safely contain the injected fluids. |
| 1135 | | | |
| 1136 | (ii) | | nonstration that the injection zone(s) is/are bounded by laterally |
| 1137 | continuous, imperme | able conf | ining units above and below the injection zone(s) adequate to |
| 1138 | • | | ressure buildup outside of the injection zone(s). The confining |
| 1139 | | | that they are free of transmissive faults and fractures. The report |
| 1140 | | | fracture properties and demonstrate that the fractures will not |
| 1141 | interfere with injection | on, serve | as conduits, or endanger USDWs. |
| 1142 | | | |
| 1143 | (iii) | | nputer model demonstrating that USDWs above and below the |
| 1144 | | | angered as a result of fluid movement. The modeling shall be done |
| 1145 | in conjunction with the | ne Area o | f Review determination. |
| 1146 | | | |
| 1147 | (iv) | | nonstration that well design and construction, in conjunction with |
| 1148 | | | on of the injectate in lieu of the requirements of Section 9 (a)(i) and |
| 1149 | will meet the well con | nstruction | requirements of paragraph (e) if this section. |
| 1150 | | | |
| 1151 | (v) | | cription of how the monitoring and testing and any additional plans |
| 1152 | | | c sequestration project to ensure protection of USDWs above and |
| 1153 | below the injection zo | one. | |
| 1154 | , | | |
| 1155 | (vi) | | nation on the location of all public water supplies affected, |
| 1156 | reasonably likely to b | e attecte | d, or served by USDWs in the Area of Review. |
| 1157 | / ··· | | |
| 1158 | (vii) | Any c | other information requested by the director. |
| 1159 | | | |

| 1160 1161 | (b) | | | | | | |
|--|--|------------------|--|--|--|--|--|
| 1162 | director shall give public notice that an injection depth waiver request has been submitted. The notice shall clearly state: | | | | | | |
| 1163 | notice shan ele | arry sta | | | | | |
| 1164 1165 | | (i) | The depth of the proposed injection zone(s). | | | | |
| 1166 | (ii) The location of the injection wells. | | | | | | |
| 1167 1168 | | (iii) | The name and depth of all USDWs within the Area of Review. | | | | |
| 1169 1170 | | (iv) | A map of the Area of Review. | | | | |
| 1171 1172 | | (v) | The names of any public water supplies affected, reasonably likely to be | | | | |
| 1173 1174 | affected, or ser | ved by | the USDWs in the Area of Review. | | | | |
| 1175 1176 | Water System | (vi) Supervi | The results of any consultation between the UIC program and the Public sion program within the Area of Review. | | | | |
| 1177 1178 1179 1180 1181 1182 | Administrator. | informa Based | wing the injection depth waiver application public notice, the director shall ation received through the waiver application process to the US EPA on the information provided, the US EPA Administrator shall provide non-concurrence regarding waiver issuance. | | | | |
| 1182 1183 1184 1185 1186 | | | If the US EPA Administrator requires additional information to make a shall provide the information. The US EPA Administrator may require w information. | | | | |
| 1187 1188 | injection waive | (ii) er witho | In no case shall the director of a State-approved program issue a depth ut receipt of written concurrence from the US EPA Administrator. | | | | |
| 1189 1190 1191 | (d) EPA shall post | | njection depth waiver is issued, within thirty (30) days of issuance, the owing information on the Office of Water's website: | | | | |
| 1192 1193 | | (i) | The depth of the proposed injection zone(s). | | | | |
| 1194 1195 | | (ii) | The location of the injection wells. | | | | |
| 1196 1197 1198 | | (iii) | The name and depth of all USDWs within the Area of Review. | | | | |
| 1199 1199 1200 | | (iv) | A map of the Area of Review. | | | | |
| 1200 1201 1202 1203 | affected, or ser | (v) rved by | The names of any public water supplies affected, reasonably likely to be the USDWs in the Area of Review. | | | | |
| 1203 1204 1205 | | (vi) | The date of waiver issuance. | | | | |
| 1206 | (e) | Upon | receipt of a waiver of the requirement to inject below the lowermost | | | | |
| 1207 | * * | | equestration, the owner or operator of a Class VI well must comply with the | | | | |
| 1208 | following: | <i>U</i> . 33 | , , , , , , , , , , , , , , , , , , , | | | | |

| 1209 | (i) All requirements of federal regulation §§146.84, 146.85, 146.87, 146.88, |
|--------------|---|
| 1210 1211 | 146.89, 146.91, 146.92, and 146.94. |
| | (ii) All the requirements of federal regulation \$146.06 with the fellowing |
| 1212 | (ii) All the requirements of federal regulation §146.86 with the following |
| 1213 1214 | modified requirements: |
| | (A) The Class VI well shall be constructed and completed to married |
| 1215 | (A) The Class VI well shall be constructed and completed to prevent |
| 1216 | the movement of fluids into any unauthorized zones including USDWs. |
| 1217 | (D) The seeing and consenting any small be designed to any sout |
| 1218 | (B) The casing and cementing program shall be designed to prevent |
| 1219 1220 | the movement of fluids into any unauthorized zones including USDWs. |
| | (C) The surface assing shall sutered through the base of the respect |
| 1221 1222 | (C) The surface casing shall extend through the base of the nearest |
| 1223 | USDW directly above the injection zone and shall be cemented to the surface; or at the director's |
| 1223 | discretion, another formation above the injection zone and below the nearest USDW above the |
| | injection zone. |
| 1225 | (iii) All the requirements of federal regulations \$146,00 and \$146,02 with the |
| 1226 1227 | (iii) All the requirements of federal regulations §146.90 and §146.93 with the |
| 1227 | following modified requirements: |
| 1228 | (A) The evener or engretor shall manife the energy division quality. |
| 1229 | (A) The owner or operator shall monitor the groundwater quality, |
| 1230 | geochemical changes, and pressure in the first USDWs immediately above and below the |
| 1231 | injection zone(s); and any other formation at the discretion of the director. |
| 1232 | (D) Using motheds approved by the director testing and monitoring |
| 1233 | (B) Using methods approved by the director, testing and monitoring |
| 1234 | to track the extent of the carbon dioxide plume and the presence or absence of elevated pressure. |
| 1235 | (iv) Any additional requirements requested by the director to ensure |
| 1230 | (iv) Any additional requirements requested by the director to ensure protection of USDWs above and below the injection zone(s). |
| 1237 | protection of OSDWs above and below the injection zone(s). |
| 1238 | Section 11. Logging, sampling, and testing prior to injection well operation. |
| 1239 | |
| 1240 | (a) During the drilling and construction of a Class VI injection well, the owner or |
| 1241 | operator must run appropriate logs, surveys and tests to determine or verify the depth, thickness, |
| 1242 | porosity, permeability, and lithology of, and the salinity of any formation fluids within, for all |
| 1243 | relevant geologic formations in order to ensure conformance with the injection well construction |
| 1244 | requirements under Section 9, and to establish accurate baseline data against which future |
| 1245 | measurements may be compared. |
| 1246 | |
| 1247 | (i) The owner or operator must submit to the administrator a descriptive |
| 1248 | report prepared by a knowledgeable log analyst that includes an interpretation of the results of |
| 1249 | such logs and tests. The administrator may require such logs and tests as may be needed after |
| 1250 | taking into account the availability of similar data in the area of the drilling site, the construction |
| 1251 | plan, and the need for additional information that may arise from time to time as the construction |
| 1252 | of the well progresses, and these may include the following: |
| 1253 | |
| 1254 | (A) Deviation checks measured during, or after drilling on all holes |
| 1255 | constructed by drilling a pilot hole which is subsequently enlarged by reaming or another method |
| 1256 | Such checks must be at sufficiently frequent intervals to determine the location of the borehole |

| 1257 | | ues for f | fluid movement in the form of diverging holes are not |
|--------------|-------------------------------------|-----------|---|
| 1258 | created during drilling; and | | |
| 1259 | (D) | D. C | |
| 1260 | (B) | Before | e and upon installation of the surface casing, unless waived |
| 1261 | in writing by the administrator: | | |
| 1262 | | Œ | |
| 1263 | In face the control in tracelled as | (I) | Resistivity, spontaneous potential, and caliper logs |
| 1264 | before the casing is installed; ar | 10 | |
| 1265 1266 | | (II) | Coment avaluation loss often the assing is set and |
| 1267 | comented to avaluate coment a | (II) | Cement evaluation logs, after the casing is set and |
| 1268 | voids, or other areas of missing | | adially with sufficient resolution to identify channels, |
| 1269 | voids, of other areas of missing | Cement | |
| 1270 | (C) | Refore | e and upon installation of the long string casing: |
| 1270 | (C) | Deloic | and upon instantation of the long string casing. |
| 1272 | | (I) | Resistivity, spontaneous potential, porosity, caliper, |
| 1273 | gamma ray fracture finder logs | . , | y other logs the administrator requires for the given |
| 1274 | geology before the casing is ins | | |
| 1275 | geology before the easing is his | tarica, c | ino |
| 1276 | | (II) | A cement bond and variable density log, and a |
| 1277 | temperature log after the casing | ` / | |
| 1278 | temperature rog arter the easing | 15 500 0 | |
| 1279 | (D) | Test(s) |) designed to demonstrate the internal and external |
| 1280 | mechanical integrity of injection | | |
| 1281 | 3 | , | |
| 1282 | | (I) | A pressure test with liquid or gas; |
| 1283 | | . , | |
| 1284 | | (II) | Diagnostic tools, such as oxygen-activation logging; |
| 1285 | | | |
| 1286 | | (III) | A temperature or noise log; and |
| 1287 | | | |
| 1288 | | (IV) | A casing inspection log. |
| 1289 | | | |
| 1290 | (E) | Any al | Iternative methods that provide equivalent or better |
| 1291 | information and that are require | d of, an | d/or approved by the administrator. |
| 1292 | | | |
| 1293 | (b) The owner or o | perator | must take and submit to the administrator a report |
| 1294 | describing whole cores or sidew | all core | es of the injection zone and confining system, and |
| 1295 | formation fluid samples from the | e inject | ion zone(s). |
| 1296 | | | |
| 1297 | | | ator may accept data from cores and fluid samples from |
| 1298 | | erator ca | an demonstrate that such data are representative of |
| 1299 | conditions in the wellbore. | | |
| 1300 | | | |
| 1301 | | | operation, the owner or operator must record the formation |
| 1302 | temperature, formation fluid pH | and co | inductivity, and reservoir pressure of the injection zone(s). |
| 1303 | | | |

| 1304 | (d) | | time prior to injection well operation, the owner or operator must | | | | |
|------|--|-----------|---|--|--|--|--|
| 1305 | determine fracture pressures of the injection and confining zones and conduct tests to verify | | | | | | |
| 1306 | hydrogeologic and geo-mechanical characteristics of the injection zone, e.g., injectivity tests. | | | | | | |
| 1307 | | TD1 | | | | | |
| 1308 | (e) | | vner or operator must provide the administrator with the opportunity to | | | | |
| 1309 | witness all logg | ging and | testing by this subpart. | | | | |
| 1310 | | | | | | | |
| 1311 | | (i) | The owner or operator must submit a schedule of such activities to the | | | | |
| 1312 | administrator u | pon spu | dding the well and notify the administrator of any changes to the schedule | | | | |
| 1313 | at least 48 hour | s prior t | o the scheduled test. | | | | |
| 1314 | Section | n 12. | Injection well operating requirements. | | | | |
| 1315 | | | | | | | |
| 1316 | (a) | The ov | vner or operator must comply with a maximum injection pressure limit | | | | |
| 1317 | ` ' | | or and specified in the permit. In approving a maximum injection pressure | | | | |
| 1318 | | | consider the results of well tests and, where appropriate, geomechanical or | | | | |
| 1319 | • | | s the risks of tensile failure and shear failure. The director shall approve | | | | |
| 1320 | | | onable degree of certainty, will avoid initiation or propagation of fractures | | | | |
| 1320 | | | | | | | |
| | • | - | r cause non-transmissive faults transecting the confining zone to become | | | | |
| 1322 | | | se may injection pressure cause movement of injection or formation fluids | | | | |
| 1323 | | it endang | gers a USDW, or otherwise threatens human health, safety, or the | | | | |
| 1324 | environment. | | | | | | |
| 1325 | | | | | | | |
| 1326 | | (i) | In no case may injection pressure initiate fractures in the confining | | | | |
| 1327 | zone(s) or caus | e the mo | ovement of injectate or formation fluids that endangers a USDW or | | | | |
| 1328 | otherwise threatens human health, safety, or the environment. | | | | | | |
| 1329 | | | | | | | |
| 1330 | (b) | Injection | on of the carbon dioxide stream between the outermost casing protecting | | | | |
| 1331 | USDWs and th | | ore is prohibited. | | | | |
| 1332 | | | 1 | | | | |
| 1333 | (c) | The ov | vner or operator must fill the annulus between the tubing and the long | | | | |
| 1334 | ` ' | | n-corrosive fluid approved by the administrator. | | | | |
| 1335 | (i) The owner or operator must maintain a positive pressure on the annulus. | | | | | | |
| 1336 | | (1) | The owner of operator must maintain a positive pressure on the aintuits. | | | | |
| 1337 | (d) | Othor t | than during periods of well workover (maintenance) approved by the | | | | |
| | | | | | | | |
| 1338 | | | the sealed tubing-casing annulus is, by necessity, disassembled for | | | | |
| 1339 | | | ive procedures, the owner or operator must maintain mechanical integrity | | | | |
| 1340 | of the injection | well at | all times. | | | | |
| 1341 | | | | | | | |
| 1342 | (e) | The ov | vner or operator must install and use continuous recording devices to | | | | |
| 1343 | monitor: | | | | | | |
| 1344 | | | | | | | |
| 1345 | | (i) | Injection pressure; and | | | | |
| 1346 | | | | | | | |
| 1347 | | (ii) | Rate, volume, and temperature of the carbon dioxide stream. | | | | |
| 1348 | | · • | • | | | | |
| 1349 | (f) | The ov | vner or operator must regularly monitor the pressure on the annulus | | | | |
| 1350 | ` ' | | the long string casing and annulus fluid volume. | | | | |
| 1351 | | <i>U</i> | | | | | |

| 1352 | (g) | | | operator must install, test, and use alarms and automatic shut-off | |
|--------------|--|-------------|-----------|---|--|
| 1353 | systems, designed to alert the operator and shut-in the well when operating parameters such as | | | | |
| 1354 | injection rate, injection pressure, or other parameters approved by the administrator diverge | | | | |
| 1355 | beyond ranges | s and/or g | gradient | ts specified in the permit. | |
| 1356 | | | | | |
| 1357 | (h) | If an a | utomat | ic shutdown is triggered or a loss of mechanical integrity is | |
| 1358 | discovered, th | e owner | or oper | ator must immediately investigate and identify as expeditiously as | |
| 1359 | possible the ca | ause. | • | | |
| 1360 | 1 | | | | |
| 1361 | | (i) | If. up | on such investigation, the well appears to be lacking mechanical | |
| 1362 | integrity, or if | ` ' | | uired under paragraphs (e), (f), and (g) of this section otherwise | |
| 1363 | | | | lacking mechanical integrity, the owner or operator must: | |
| 1364 | | | | 5 | |
| 1365 | | | (A) | Immediately cease injection; | |
| 1366 | | | (11) | immediately eease injection, | |
| 1367 | | | (B) | Take all steps reasonably necessary to determine whether there | |
| 1368 | may have hee | n a ralaa | ` ' | e injected carbon dioxide stream into any unauthorized zone; | |
| 1369 | may have bee. | ii a reica: | se or un | e injected carbon dioxide stream into any unauthorized zone, | |
| 1370 | | | (C) | Notify the administrator within 24 hours of discovery; | |
| 1370 | | | (C) | Notify the administrator within 24 hours of discovery, | |
| 1371 | | | (D) | Restore and demonstrate mechanical integrity to the satisfaction | |
| 1372 | of the adminis | strator oa | ` / | s practicable and prior to resuming injection; and | |
| 1373 | of the adminis | strator as | soon as | s practicable and prior to resuming injection, and | |
| 1374 | | | (E) | Notify the administrator when injection can be avacated to | |
| 1375 | #0.633 #1 0.0 | | (E) | Notify the administrator when injection can be expected to | |
| 1370 | resume. | | | | |
| 1377 | Section | on 13. | Mecl | nanical integrity. | |
| 1378 | | | | | |
| 1379 | (a) | A Clas | ss VI w | ell has mechanical integrity if: | |
| 1380 | () | | | | |
| 1381 | | (i) | There | e is no significant leak in the casing, tubing or packer; and | |
| 1382 | | (-) | | | |
| 1383 | | (ii) | There | e is no significant fluid movement into a USDW through channels | |
| 1384 | adjacent to the | ` ' | | | |
| 1385 | and and only to the | - 111,00013 | | | |
| 1386 | (b) | To eva | aluate tl | he absence of significant leaks under paragraph (a)(i) of this section, | |
| 1387 | ` ' | | | lowing an initial annulus pressure test, monitor injection pressure, | |
| 1388 | | | | essure on the annulus between tubing and long string casing and | |
| 1389 | | | | fied in Section 12 (e) and (f); | |
| 1390 | amuus muu | voiume a | is speci. | fied in Section 12 (e) and (1), | |
| 1391 | (a) | A+ 100 | et one | a par year the evener or eperator must confirm the absence of | |
| | (c) | | | e per year, the owner or operator must confirm the absence of | |
| 1392 1393 | | | | nder paragraph (a)(ii) of this section using a method acceptable to | |
| | | ator (e.g | ., diagr | nostic surveys such as oxygen-activation or temperature or noise | |
| 1394 | logs). | | | | |
| 1395 | (E) | Til | 1 | and an array magnifus array of how took to a see best a result and sell that a life | |
| 1396 | (d) | | | rator may require any other test to evaluate mechanical integrity | |
| 1397 | under paragraph (a)(i) or (a)(ii) of this section. Also, the administrator may allow the use of a test | | | | |
| 1398 | | | | tegrity other than those listed above, with the written approval of the | |
| 1399 | US EPA Adm | unistrato | Γ. | | |

| 1400 1401 | (i) To obtain approval, the administrator must submit a written request to the US EPA Administrator, which must set forth the proposed test and all technical data | | | | |
|--------------------------------------|--|---|---|--|--|
| 1402 1403 | supporting its use. | | | | |
| 1404 1405 1406 1407 | (e) In conducting and evaluating the tests enumerated in this section or others to be allowed by the administrator, the owner or operator and the administrator must apply methods and standards generally accepted in the industry. | | | | |
| 1408 1409 1410 | (i) tests to the administra | | the owner or operator reports the results of mechanical integrity e shall include a description of the test(s) and the method(s) used. | | |
| 1411 1412 1413 | (ii) and other test data su | | ring his/her evaluation, the administrator must review monitoring nee the previous evaluation. | | |
| 1414 1415 1416 1417 1418 | presented by the own administrator to demo | er or oper onstrate th t of fluid i | ator may require additional or alternative tests if the results ator under paragraph (e) of this section are not satisfactory to the at there is no significant leak in the casing, tubing or packer, or not or between USDWs resulting from the injection activity as (a)(ii) of this section. | | |
| 1419 | Section 14. | Testin | g and monitoring requirements. | | |
| 1420 1421 1422 1423 1424 | | nitoring p | operator of a Class VI well must prepare, maintain, and comply lan to verify that the geologic sequestration project is operating as ang USDWs. | | |
| 1425 1426 1427 1428 | (i) application, for Admi operator will meet the | nistrator a | sting and monitoring plan must be submitted with the permit approval, and must include a description of how the owner or nents of this section. | | |
| 1429 1430 1431 | (b) Testi minimum, include: | ng and mo | onitoring associated with geologic sequestration projects must, at a | | |

| 1626 | closure plan as a part o | f the per | rmit application to be approved by the administrator. |
| 1627 | | | |
| 1628 | (ii) | The po | ost-injection site care and site closure plan must include the |
| 1629 | following information: | _ | |
| 1630 | | | |
| 1631 | | (A) | Detailed plans for post-injection monitoring, verification, |
| 1632 | maintenance, and mitig | ` , | |
| 1633 | | | |
| 1634 | | (B) | The pressure differential between pre-injection and predicted |
| 1635 | post-injection pressure | | |
| 1636 | | | · · · · · · · · · · · · · · · · · · · |
| 1637 | | (C) | The predicted position of the carbon dioxide plume and |
| 1638 | associated pressure fro | ` / | time when plume movement has ceased and pressure differentials |

1641 1642 (D) A description of post-injection monitoring locations, methods, 1643 and proposed frequency; and 1644 1645 A proposed schedule for submitting post-injection site care (E) 1646 monitoring results to the administrator. 1647 1648 (iii) Upon cessation of injection, owners or operators of Class VI wells must 1649 either submit an amended post-injection site care and site closure plan or demonstrate to the 1650 administrator through monitoring data and modeling results that no amendment to the plan is 1651 needed. 1652 1653 (iv) The owner or operator may modify and resubmit the post-injection site 1654 care and site closure plan for the administrator's approval within 30 days of such change. 1655 1656 (b) The owner or operator shall monitor the site following the cessation of injection. 1657 1658 (i) The owner or operator shall continue to conduct monitoring as specified 1659 in the administrator-approved post-injection site care and site closure plan until closure is 1660 authorized by the director. 1661 1662 (ii) The owner or operator can request and demonstrate to the satisfaction of 1663 the administrator that the post-injection site care and site closure plan should be revised to reduce 1664 the frequency of monitoring. 1665 1666 Prior to authorization for site closure, the owner or operator must 1667 demonstrate to the director, based on monitoring, other site-specific data, and modeling that is 1668 reasonably consistent with site performance, that no additional monitoring is needed to ensure 1669 that the geologic sequestration project does not, and is not expected to pose an endangerment to a 1670 USDW or otherwise threaten human health, safety, or the environment. In addition, the owner or 1671 operator must demonstrate, based on the best available understanding of the site, including 1672 monitoring data and/or modeling, that all other site closure standards and requirements have been 1673 met. 1674 1675 If such a demonstration cannot be made, the owner or operator must (iv) 1676 continue post-injection site care. 1677 1678 The owner or operator must notify the director at least 120 days before (v) 1679 filing a request for site closure. At this time, if any changes have been made to the original post-1680 injection site care and site closure plan, the owner or operator must also provide the revised plan. 1681 At the discretion of the director, a shorter notice period may be allowed. 1682 1683 After the director has authorized site closure, the owner or operator must plug all (c)

sufficient to cause the movement of injected fluids or formation fluids into a USDW are no longer

present, as demonstrated in the area of review evaluation required under Section 8(c)(i);

1639

1640

1684

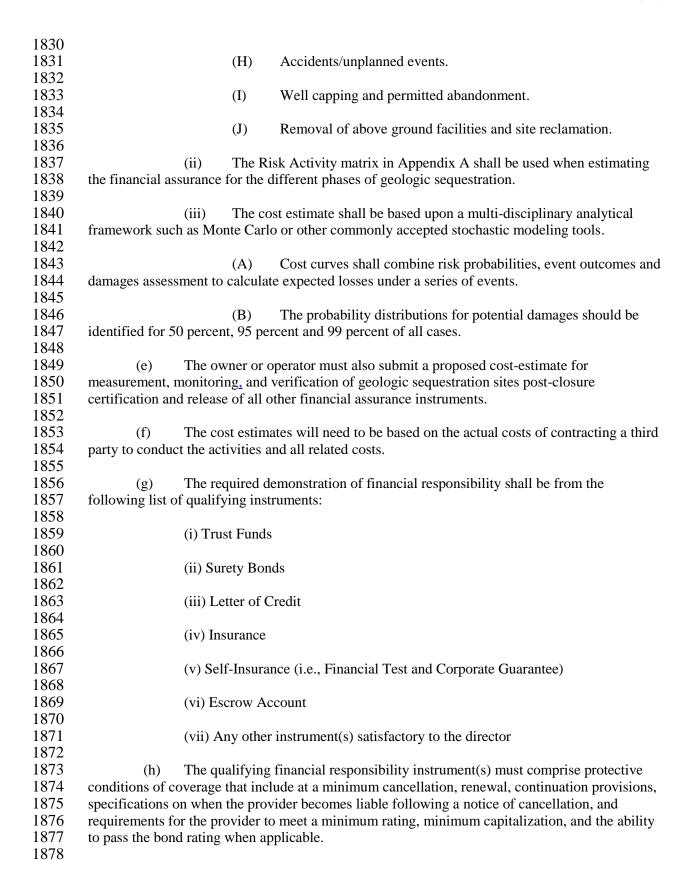

1685

monitoring wells in a manner which will not allow movement of injection or formation fluids.

| 1686 1687 | (d) Once the director has authorized site closure, the owner or operator must submit a site closure report within 90 days after completion of all closure operations. The report must |
|--------------------------------------|---|
| 1688 1689 | include: |
| 1690 1691 | (i) Documentation of appropriate injection and monitoring well plugging as specified in Section 16 and paragraph (c) of this section. |
| 1692 1693 1694 | (ii) The owner or operator must provide a copy of a survey plat which has been submitted to the local zoning authority designated by the director. |
| 1695 1696 1697 | (A) The plat must indicate the location of the injection well(s) and monitoring wells relative to permanently surveyed benchmarks. |
| 1698 | |
| 1699 1700 1701 | (B) The owner or operator must also submit a copy of the plat to the US EPA Administrator. |
| 1702 1703 1704 1705 1706 | (iii) Documentation of appropriate notification and information to such State, local and tribal authorities as have authority over drilling activities to enable such State and local authorities to impose appropriate conditions on subsequent drilling activities that may penetrate the injection and confining zone(s) |
| 1707 1708 1709 1710 | (iv) Proof of providing notice to surface owners, mineral claimants, mineral owners, lessees and other owners of record of subsurface interests as to the proposed site closure. Notice requirements at a minimum shall include: |
| 1711 1712 1713 | (A) The publishing of the notice of the application in a newspaper of general circulation in each county of the proposed operation at weekly intervals for four (4) consecutive weeks; |
| 1714 1715 1716 1717 | (B) The published notice shall provide a mechanism to request a public hearing; |
| 1718 1719 1720 1721 | (C) A copy of the notice shall also be mailed to all surface owners, mineral claimants, mineral owners, lessees and other owners of record of subsurface interests which are located within one (1) mile of the proposed boundary of the geologic sequestration site. |
| 1722 1723 1724 | (v) Records reflecting the nature, composition and volume of the carbon dioxide stream. |
| 1725 1726 1727 1728 | (e) Each owner or operator of a Class VI injection well must record a notation on the deed to the facility property or any other document that is normally examined during title search that will in perpetuity provide any potential purchaser of the property the following information: |
| 1729 | (i) The fact that land has been used to sequester carbon dioxide; |
| 1730 1731 1732 1733 1734 | (ii) The name of the State agency, local authority, and/or tribe with which the survey plat was filed, as well as the address of the Regional Environmental Protection Agency Office to which it was submitted; and |

| 1735 1736 1737 | was injected, an | (iii) nd the pe | The volume of fluid injected, the injection zone or zones into which it eriod over which injection occurred. |

| 1829 | | (G) | Entrained Contaminant Releases (non-CO2). |
| 1829 | | (G) | Entrained Contaminant Releases (non-CO2). |

1879 (i) Cancellation – An owner or operator must provide that their financial 1880 mechanism may not cancel, terminate or fail to renew except for failure to pay such financial 1881 instrument. If there is a failure to pay the financial instrument, the financial institution may elect 1882 to cancel, terminate, or fail to renew the instrument by sending notice by certified mail to the 1883 owner or operator and the director. The cancellation must not be final for 120 days after receipt of 1884 cancellation notice. The owner or operator must provide an alternate financial responsibility 1885 demonstration within 60 days of notice of cancellation, and if an alternate financial responsibility 1886 demonstration is not acceptable (or possible), any funds from the instrument being cancelled must 1887 be released within 60 days of notification by the director. 1888 1889 Renewal – Owners or operators must renew all financial instruments, if 1890 an instrument expires, for the entire term of the geologic sequestration project. The instrument 1891 may be automatically renewed as long as, at a minimum, the owner or operator has the option of 1892 renewal at the face amount of the expiring instrument. 1893 1894 Continuation – Cancellation, termination, or failure to renew may not 1895 occur and the financial instrument shall remain in full force and effect in the event that on or 1896 before the date of expiration: 1897 1898 (A) The director deems the facility abandoned. 1899 1900 (B) The permit is terminated, revoked, or a new permit is denied. 1901 1902 Closure is ordered by the director, a U.S. district court, or other (C) 1903 court of competent jurisdiction. 1904 1905 The owner or operator is named as debtor in a voluntary or (D) 1906 involuntary proceeding under Title 11 (Bankruptcy), U.S. Code. 1907 1908 (E) The amount due is paid. 1909 1910 The qualifying financial responsibility instrument(s) must be approved by the 1911 director. The director shall also approve the use and length of pay-in-periods for trust funds and 1912 escrow accounts. 1913 1914 (i) The director shall consider and approve the financial responsibility 1915 demonstration for all the phases of the geologic sequestration project prior to issuing a Class VI 1916 permit. 1917 1918 The director may find that the financial responsibility demonstration is (ii) 1919 unsatisfactory for any reason, as long as that reason is not arbitrary or capricious. The director 1920 may exercise discretion in negotiating a satisfactory financial responsibility demonstration or to 1921 deny a demonstration. 1922 1923 The owner or operator must provide any updated information related to (iii) 1924 their financial responsibility instrument(s) on an annual basis and if there are any changes, the 1925

director must evaluate the financial responsibility demonstration to confirm that the instrument(s)

used remain adequate for use. The owner or operator must maintain financial responsibility

1926

requirements regardless of the status of the director's review of the financial responsibility demonstration.

(iv) The owner or operator must provide an adjustment of the cost estimate to the director within 60 days of notification by the director, if the director determines during the annual evaluation of the qualifying financial responsibility instrument(s) that the most recent demonstration is no longer adequate.

(v) During the active life of the geologic sequestration project, the owner or operator must adjust the cost estimate for inflation within 60 days prior to the anniversary date of the establishment of the financial instrument(s) used to comply with paragraph (g) of this section and provide this adjustment to the director. The owner or operator must also provide to the director written updates of adjustments to the cost estimate within 60 days of any amendments to the area of review and corrective action plan (§146.84), the injection well plugging plan (§146.92), the post-injection site care and site closure plan (§146.93), the emergency and remedial response plan (§146.94), and complete site reclamation in the event of default.

(vi) The director must approve any decrease or increase to the initial cost estimate. During the active life of the geologic sequestration project, the owner or operator must revise the cost estimate no later than 60 days after the director has approved the request to modify the area of review and corrective action plan (§146.84), the injection well plugging plan (§146.92), the post-injection site care and site closure plan (§146.93), and the emergency and response plan (§146.94), if the change in the plan increases the cost. If the change to the plans decreases the cost, any withdrawal of funds must be approved by the director. Any decrease to the value of the financial assurance instrument must first be approved by the director. The revised cost estimate must be adjusted for inflation as specified in the preceding paragraph.

(vii) Whenever the current cost estimate increases to an amount greater than the face amount of a financial instrument currently in use, the owner or operator, within 60 days after the increase, must either cause the face amount to be increased to an amount at least equal to the current cost estimate and submit evidence of such increase to the director, or obtain other financial responsibility instruments to cover the increase. Whenever the current cost estimate decreases, the face amount of the financial assurance instrument may be reduced to the amount of the current cost estimate only after the owner or operator has received written approval from the director.

(j) The owner or operator may demonstrate financial responsibility by using one or multiple qualifying financial instruments for specific phases of the geologic sequestration project.

(i) Self-bonds shall not be permitted for the post-closure phase.

(ii) In the event that the owner or operator combines more than one instrument for a specific geologic sequestration phase (e.g., well plugging), such combination must be limited to instruments that are not based on financial strength or performance (i.e., self-insurance or performance bond). For example trust funds, surety bonds guaranteeing payment into a trust fund, letters of credit, escrow account, and insurance.

 (iii) When using a third-party instrument to demonstrate financial responsibility, the owner or operator must provide proof that the third-party providers either have passed financial strength requirements based on credit ratings; or has met a minimum rating, minimum capitalization, and ability to pass the bond rating when applicable.

(iv) An owner or operator using certain types of third party instruments must establish a standby trust to enable the State of Wyoming to be party to the financial responsibility agreement without the State of Wyoming being the beneficiary of any funds. The standby trust fund must be used along with other financial responsibility instruments (e.g., surety bonds, letters of credit, or escrow accounts) to provide a location to place funds if needed.

(v) An owner or operator may deposit money into an escrow account to cover financial responsibility requirements; this account must segregate funds sufficient to cover estimated costs for Class VI (geologic sequestration) financial responsibility from other accounts and uses.

(vi) An owner or operator or its guarantor may use **self-insurance** to demonstrate financial responsibility for certain phases of geologic sequestration projects. In order to satisfy this requirement the owner or operator must meet a Tangible Net Worth of an amount approved by the director, have a Net working capital and tangible net worth each at least six times the sum of the current well plugging, post injection site care and site closure cost, have assets located in the United States amounting to at least 90 percent of total assets or at least six times the sum of the current well plugging, post injection site care and site closure cost, and must submit a report of its bond rating and financial information annually. In addition the owner or operator must either: have a bond rating test of AAA, AA, A, or BBB as issued by Standard & Poor's or Aaa, Aa, A, or Baa as issued by Moody's; or meet all of the following five financial ratio thresholds: a ratio of total liabilities to net worth less than 2.0; a ratio of current assets to current liabilities greater than 1.5; a ratio of the sum of net income plus depreciation, depletion, and amortization to total liabilities greater than 0.1; a ratio of current assets minus current liabilities to total assets greater than -0.1; and a net profit (revenues minus expenses) greater than 0.

(vii) An owner or operator who is not able to meet corporate **financial test** criteria may arrange a corporate guarantee by demonstrating that its corporate parent meets the financial test requirements on its behalf. The parent's demonstration that it meets the financial test requirement is insufficient if it has not also guaranteed to fulfill the obligations for the owner or operator.

(viii) An owner or operator may obtain an insurance policy to cover the estimated costs of geologic sequestration activities requiring financial responsibility. This insurance policy must be obtained from a third party provider.

(k) The owner or operator must maintain financial responsibility and resources until the director receives and approves the completed post-injection site care and site closure plan or the director approves site closure.

(i) Post-injection site care shall be for a period of not less than ten (10) years after the date when all wells excluding monitoring wells have been appropriately plugged and abandoned, all subsurface operations and activities have ceased and all surface equipment and improvements have been removed or appropriately abandoned, or so long thereafter as necessary

24-42

to obtain a completion and release certificate from the administrator certifying that plume stabilization has been achieved without the use of control equipment based on a minimum of three consecutive years of monitoring data.

(ii) The site closure plan shall address all reclamation, required monitoring, and remediation sufficient to show that the carbon dioxide injected into the geologic sequestration site will not harm or present a risk to human health, safety, the environment, or drinking water supplies.

(l) The owner or operator must notify the director by certified mail of adverse financial conditions such as bankruptcy that may affect the ability to carry out injection well plugging and post-injection site care and site closure.

(i) In the event that the owner or operator or the third party provider of a financial responsibility instrument is going through a bankruptcy, the owner or operator must notify the director by certified mail of the commencement of a voluntary or involuntary proceeding under Title 11 (Bankruptcy), U.S. Code, naming the owner or operator as debtor, within 10 days after commencement of the proceeding.

(ii) A guarantor of a corporate guarantee must make such a notification to the director if he/she is named as debtor, as required under the terms of the corporate guarantee.

(iii) An owner or operator who fulfills the requirements of paragraph (g) of this section by obtaining a trust fund, surety bond, letter of credit, escrow account, or insurance policy will be deemed to be without the required financial assurance in the event of bankruptcy of the trustee or issuing institution, or a suspension or revocation of the authority of the trustee institution to act as trustee of the institution issuing the trust fund, surety bond, letter of credit, escrow account, or insurance policy. The owner or operator must establish other financial assurance within 60 days after such an event.

(m) The owner or operator may be released from a financial instrument in the following circumstances:

(i) The owner or operator has completed the phase of the geologic sequestration project for which the financial instrument was required and has fulfilled all its financial obligations as determined by the director, including obtaining financial responsibility for the next phase of the GS project, if required.

(ii) The owner or operator has submitted a replacement financial instrument and received written approval from the director accepting the new financial instrument and releasing the owner or operator from the previous financial instrument.

(iii) The owner or operator has submitted a revised cost estimate for the remaining phases of the geologic sequestration project or based on a revised risk assessment. The revised cost estimate may demonstrate that a partial release of the financial instrument is warranted and can still provide adequate financial assurance for the remainder of the project. Partial release of the financial instrument is at the discretion of the director.

 $\begin{array}{c} 2070 \\ 2071 \end{array}$

2072 Following the release of all financial assurance and receipt of a site closure 2073 certificate, the director must approve the cost estimate prepared for the post-closure measurement, 2074 monitoring and verification of a geologic sequestration site. The cost estimate shall only be 2075 provided after plume stabilization and all remediation work has been completed. 2076 Section 20. Public participation, public notice and public hearing requirements. 2077 2078 Public notice is not required for minor modifications as described by Section 4(b) (a) 2079 (x) of this chapter or for a permit denial where the application is determined incomplete. 2080 2081 The administrator shall give public notice if a draft permit has been prepared or a 2082 hearing has been scheduled. 2083 2084 (c) Public notice of the preparation of a draft permit shall allow at least 60 days for 2085 public comment. Public notice of a public hearing shall be given at least 30 days before the 2086 hearing. Public notice of the hearing may be given at the same time as public notice of the draft 2087 permit and the two notices may be combined. 2088 2089 Public notice shall be given by: (d) 2090 2091 (i) Mailing a copy of the notice to the following persons: 2092 2093 (A) The applicant, by certified or registered mail: 2094 2095 The U.S. Environmental Protection Agency; (B) 2096 2097 (C) Wyoming Game and Fish Department; 2098 2099 (D) Wyoming State Engineer; 2100 2101 (E) State Historical Preservation Officer; 2102 2103 (F) Wyoming Oil and Gas Conservation Commission; 2104 2105 (G) Wyoming State Geological Survey; 2106 2107 (H) Wyoming Water Development Office; 2108 2109 (I)Persons on the mailing list developed by the department, 2110 including those who request in writing to be on the list and by soliciting participants in public 2111 hearings in that area for their interest in being included on "area" mailing lists; and 2112 2113 Any unit of local government having jurisdiction over the area (J) 2114 where the facility is proposed to be located. 2115 2116 Publication of the notice in a newspaper of general circulation in the 2117 location of the facility or operation; and 2118

| 2119 | | (iii) | At the discretion of the administrator, any other method reasonably |
|------|-------------------|------------|--|
| 2120 | expected to give | ` / | notice of the action in question to the persons potentially affected by it, |
| 2121 | | | s or any other forum or medium to elicit public participation. |
| 2122 | merading press | o rerease. | s of any other forum of medium to enem public participation. |
| 2123 | (a) | A 11 mys1 | alia notices issued under this shorter shall contain the following minimum |
| | (e) | An put | olic notices issued under this chapter shall contain the following minimum |
| 2124 | information: | | |
| 2125 | | | |
| 2126 | | (i) | Name and address of the department; |
| 2127 | | | |
| 2128 | | (ii) | Name and address of permittee or permit applicant, and, if different, of |
| 2129 | the facility or a | ectivity r | egulated by the permit; |
| 2130 | | | |
| 2131 | | (iii) | A brief description of the business conducted at the facility or activity |
| 2132 | described in the | ` / | application or the draft permit; |
| 2133 | described in th | e permit | application of the trust permit, |
| 2134 | | (iv) | Name, address and telephone number of a person from whom interested |
| 2135 | | ` / | |
| | | | ther information, including copies of the draft permit, as the case may be, |
| 2136 | statement of ba | asis or ta | ct sheet, and the application; |
| 2137 | | | |
| 2138 | | (v) | A brief description of comment procedures, procedures to request a |
| 2139 | hearing, and ot | her proc | edures which the public may use to participate in the final permit decision; |
| 2140 | and | | |
| 2141 | | | |
| 2142 | | (vi) | Any additional information considered necessary and proper. |
| 2143 | | ` / | |
| 2144 | (f) | In addi | tion to the information required in (e) of this section, any notice for public |

| 2146 | nearing shan co | ontain tii | ic following. |
| | | (:) | Defended to the date of a mailton will an element of the account. |
| 2147 | | (i) | Reference to the date of previous public notices relating to the permit; |
| 2148 | | | |
| 2149 | | (ii) | Date, time and place of hearing; and |
| 2150 | | | |
| 2151 | | (iii) | A brief description of the nature and purpose of the hearing, including |
| 2152 | applicable rule | s and pro | ocedures. |
| 2153 | | _ | |
| 2154 | (g) | The de | partment shall provide an opportunity for the applicant, permittee, or any |
| 2155 | _ | | omit written comments regarding any aspect of a permit or to request a |
| 2156 | public hearing. | | value with the second state of the second stat |
| 2157 | public ficulting. | | |
| 2158 | (b) | All inf | ormation received on or with the normit application shall be made |
| | (h) | | ormation received on or with the permit application shall be made |
| 2159 | | _ | for inspection and copying except such information as has been determined |
| 2160 | to constitute tra | ade secre | ets or confidential information pursuant to W.S. 35-11-1101. |
| 2161 | | | |
| 2162 | (i) | | the public comment period, any interested person may submit written |
| 2163 | comments on t | he draft | permit and may request a public hearing. Requests for public hearings |
| 2164 | must be made i | in writin | g to the administrator and shall state the reasons for the request. |
| 2165 | | | - |
| 2166 | (j) | The ad | ministrator shall hold a hearing whenever the administrator finds, on the |
| 2167 | | | nificant degree of public interest in a draft permit. The administrator has |
| _101 | casis of reques | , 5151 | minute de Breeze or provide interest in a draft permit. The administrator has |

2168 the discretion to hold a hearing whenever such a hearing may clarify issues involved in a permit 2169 decision. 2170 2171 (k) The public comment period shall automatically extend to the close of any public 2172 hearing. The administrator may also extend the comment period by so stating at the public 2173 hearing. 2174 2175 The director shall render a decision on the draft permit within 60 days after the 2176 completion of the comment period if no hearing is requested. If a hearing is held, the director 2177 shall make a decision on any department hearing as soon as practicable after receipt of the 2178 transcript or after the expiration of the time set to receive written comments. 2179 2180 At the time a final decision is issued, the department shall respond, in writing, to 2181 those comments received during the public comment period or comments received during the 2182 allotted time for a hearing held by the department. This response shall:

2183 2184

2185 2186

2187

2188 2189

2190 2191

2192

2193

- (i) Specify any changes that have been made to the permit; and
- (ii) Briefly describe and respond to all comments voicing a legitimate technical or regulatory concern that is within the authority of the department to regulate.
 - (n) The response to comments shall also be available to the public.
- (o) Requests for a contested case hearing on a permit issuance, denial, revocation, termination, or any other final department action appealable to the Council shall be in accordance with the department's rules of practice and procedure.

Appendix A

Risk Activity Table

| | Major Risk (Feature, Event, or Process) |
|-----|---|
| 1 | Mineral Rights Infringement (Trespass) |
| 1.1 | Leakage migrates into mineral zone or hydraulic front impacts recoverable mineral |
| | zone; causes may include plume migration different than modeled. |
| 1.2 | Post injection discovery of recoverable minerals. |
| 1.3 | New technology (or economic conditions) enables recovery of previously un- |
| 1.3 | economically recoverable minerals. |
| 1.4 | Act of God (seismic event). |
| 1.5 | Formation fluid impact due to CO2 injection. |
| 1.6 | See also contributing causes 3.1, 3.2, 3.3, 3.5, 4.3, and 4.4 |
| 2 | Water Quality Contamination |
| 2.1 | Leakage of CO2 outside permitted area. |
| 2.2 | Leakage of drilling fluid contaminates potable water aquifer. |
| 2.3 | Rock/acid water (geochemistry) interaction contaminates potable water by carryover of |
| 2.3 | dissolved contaminates. |
| 2.4 | Act of God (seismic event). |
| 2.5 | Formation fluid impact due to CO2 injection. |
| 2.6 | See also contributing causes 3.1, 3.2, 3.3, 3.5, 4.3, and 4.4 |
| 3 | Single Large Volume CO2 Release to the Surface – |
| | Asphyxiation/Health/Ecological |
| 3.1 | Overpressurization (induced). |
| 3.2 | Caprock/reservoir failure. |
| 3.3 | Well blowout (at surface or bore failure below ground), includes monitoring wells – |
| 3.3 | Causes could include seal failure (well, drilling or injection equipment). |
| 3.4 | Major mechanical failure of distribution system or storage facilities above ground or |
| | below ground (near the surface). |
| 3.5 | Orphan well failure (well not identified prior to injection). |
| 3.6 | Sabotage/Terrorist attack (on surface infrastructure). |
| 3.7 | Act of God (major seismic event) |
| 4 | Low Level CO2 Release to Surface – Ecological damage due to low-level releases; |
| | potential asphyxiation |
| 4.1 | Overpressurization (induced). |
| 4.2 | Caprock/reservoir failure (Plume migrates along fault line/fissure to surface). |
| 4.3 | Incomplete geological seal (Inaccurate characterization of sub-surface geology). |
| 4.4 | Well seal failure (well, drilling or injection equipment) including monitor wells |
| | |
| 15 | Mechanical failure of distribution system or storage facilities above or below ground |
| 4.5 | Mechanical failure of distribution system or storage facilities above or below ground (near surface). |
| 4.5 | · |
| | (near surface). |

Risk Activity Table (continued)

| | Major Risk (Feature, Event, or Process) | | |
|-----|---|--|--|
| 5 | Storage Rights Infringement (CO2 or other entrained contaminate gases) – Form of Mineral Rights Infringement | | |
| 5.1 | Leakage migrates into adjacent pore space; causes may include plume migrates faster than modeled. | | |
| 5.2 | Post injection decision (due to new technology or changed economic conditions) to store gas in adjacent pore space. | | |
| 5.3 | Acts of God affecting storage capacity of pore space. | | |
| 5.4 | Formation fluid impact due to CO2 injection. | | |
| | Will also require primary contributing causes 3.1, 3.2, 3.3, 3.5, 4.3, and 4.4 | | |
| 6 | Modified Surface Topography (subsidence or uplift) Resulting in | | |
| U | Property/Infrastructure Damage | | |
| 6.1 | Induced Seismicity – Pressure of geochemistry induced reactivation of historic fault or | | |
| | dissolution of material caused by subsidence. | | |
| 6.2 | Formation fluid impact due to CO2 injection. | | |
| 7 | Entrained Contaminate (Non-CO2) Releases | | |
| 7.1 | Change in CO2 composition/properties (concentration of contaminate in CO2 supply | | |
| | increases). | | |
| 7.2 | Microbial activity initiated by injection process or composition. | | |
| | Will also require primary contributing causes 3.1, 3.2, 3.3, 3.5, 4.3, and 4.4 | | |
| 8 | Accidents/Unplanned Events (Typical Insurable Events) | | |
| 8.1 | Surface infrastructure damage | | |
| 8.2 | Saline water releases from surface storage impoundment. | | |

| | COMPIANCE ACTIVITIES THAT WILL REQUIRE FINANCIAL |
|---|--|
| | ASSURANCE |
| 1 | Well capping and permitted abandonment or removal of underground piping. |
| 2 | Removal of above-ground facilities and site reclamation (roads, wells). |
| 3 | Continuous and/or periodic monitoring. |
